Operations and Algebraic Thinking

4.OA

STANDARDS

SADLIER PROGRESS MATHEMATICS, GRADE 4

Use the four operations with whole numbers to solve problems.

4.OA.1 Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.

Lesson 1 Interpret Multiplication Equations as Comparisons—pp. 10–17

4.OA.2 Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison. See Table 2, page 96. Drawings need not show details, but should show the mathematics in the problem. (This applies wherever drawings are mentioned in the Standards.)

Lesson 2 Problem Solving: Use Multiplication and Division to Make Comparisons—pp. 18–25

4.OA.3 Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Lesson 3 Problem Solving: Multistep Problems—pp. 26–33

Gain familiarity with factors and multiples.

4.OA.4 Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.

Lesson 4 Find Factors and Multiples for Whole Numbers—pp. 34–41

Generate and analyze patterns.

4.OA.5 Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. *For example, given the rule “Add 3” and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.*

Lesson 5 Generate and Analyze Number and Shape Patterns—pp. 42–49

Number and Operations in Base Ten

4.NBT

STANDARDS

Generalize place value understanding for multi-digit whole numbers **less than or equal to 1,000,000**.

4.NBT.1 Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right by applying concepts of place value, **multiplication**, or division.

4.NBT.2 Read and write multi-digit whole numbers using **standard form, word form, and** expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons. **Grade 4 expectations in this domain are limited to whole numbers less than or equal to 1,000,000.**

4.NBT.3 Use place value understanding to round multi-digit whole numbers to any place through 1,000,000.

Use place value understanding and properties of operations to perform multi-digit arithmetic with whole numbers **less than or equal to 1,000,000**.

4.NBT.4 Fluently add and subtract multi-digit whole numbers using **a** standard algorithm.

4.NBT.5 Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

4.NBT.6 Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 6 Understand Place Value of Whole Numbers—
pp. 56–63

Lesson 7 Read, Write, and Compare Whole Numbers—
pp. 64–71

Lesson 8 Apply Place Value to Round Whole Numbers—pp. 72–79

Lesson 9 Add and Subtract Fluently with Whole Numbers—pp. 80–87

Lesson 10 Multiply Whole Numbers: Use Place Value—
pp. 88–95

Lesson 11 Multiply Whole Numbers: Use Properties of Operations—pp. 96–103

Lesson 12 Divide Whole Numbers: Use Place Value—pp. 104–111

Lesson 13 Divide Whole Numbers: Use Properties of Operations—pp. 112–119

Number and Operations—Fractions

4.NF

STANDARDS

SADLIER PROGRESS MATHEMATICS, GRADE 4

Extend understanding of fraction equivalence and ordering **limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100.**

4.NF.1 Explain why a fraction a/b is equivalent to a fraction $(n \times a)/(n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.

Lesson 14 Understand Equivalent Fractions—pp. 126–133

Lesson 15 Write Equivalent Fractions—pp. 134–141

4.NF.2 Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as $1/2$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual fraction model.

Lesson 16 Compare Two Fractions—pp. 142–149

Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers **limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100. (Fractions need not be simplified).**

4.NF.3 Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.

- Understand addition and subtraction of fractions as joining and separating parts referring to the same whole.
- Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model. *Examples:* $3/8 = 1/8 + 1/8 + 1/8$; $3/8 = 1/8 + 2/8$; $2 \frac{1}{8} = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$.
- Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.

Lesson 17 Add and Subtract Fractions with Like Denominators—pp. 150–157

Lesson 18 Decompose a Fraction as a Sum of Fractions—pp. 158–165

Lesson 19 Add and Subtract Mixed Numbers with Like Denominators—pp. 166–173

Number and Operations—Fractions

4.NF

STANDARDS

- d. Solve word problems involving addition and subtraction of fractions referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem.

4.NF.4 Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.

- a. Understand a fraction a/b as a multiple of $1/b$. For example, use a visual fraction model to represent $5/4$ as the product $5 \times (1/4)$, recording the conclusion by the equation $5/4 = 5 \times (1/4)$ or $5/4 = (1/4) + (1/4) + (1/4) + (1/4) + (1/4)$.
- b. Understand a multiple of a/b as a multiple of $1/b$, and use this understanding to multiply a fraction by a whole number. For example, use a visual fraction model to express $3 \times (2/5)$ as $6 \times (1/5)$, recognizing this product as $6/5$. (In general, $n \times (a/b) = (n \times a)/b$.)
- c. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat $3/8$ of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?

Understand decimal notation for fractions, and compare decimal fractions **limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100**.

4.NF.5 Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. For example, express $3/10$ as $30/100$, and add $3/10 + 4/100 = 34/100$. In general, students who can generate equivalent fractions can develop strategies for adding fractions with unlike denominators in general, but addition and subtraction with unlike denominators in general is not a requirement at this grade.)

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 20 Problem Solving: Add and Subtract Fractions—pp. 174–181

Lesson 21 Multiply Unit Fractions by Whole Numbers—pp. 182–189

Lesson 22 Multiply Fractions by Whole Numbers—pp. 190–197

Lesson 23 Problem Solving: Multiply Fractions by Whole Numbers—pp. 198–205

Lesson 24 Add Fractions: Denominators of 10 and 100—pp. 206–213

Number and Operations—Fractions

4.NF

STANDARDS

4.NF.6 Use decimal notation for fractions with denominators 10 or 100. *For example, rewrite 0.62 as 62/100; describe a length as 0.62 meters; locate 0.62 on a number line diagram.*

4.NF.7 Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual model.

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 25 **Write and Compare Decimal Fractions**—pp. 214–221

Lesson 25 **Write and Compare Decimal Fractions**—pp. 214–221

Measurement and Data

4.MD

STANDARDS

Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.

4.MD.1 Know relative sizes of the metric measurement units within one system of units. **Metric units include kilometer, meter, centimeter, and millimeter; kilogram and gram; and liter and milliliter.** Express a larger measurement unit in terms of a smaller unit. Record measurement conversions in a two-column table. *For example, express the length of a 4-meter rope in centimeters. Because 1 meter is 100 times as long as a 1 centimeter, a two-column table of meters and centimeters includes the number pairs 1 and 100, 2 and 200, 3 and 300,...*

4.MD.2 Solve real-world problems involving money, time, and metric measurement.

- Using models, add and subtract money and express the answer in decimal notation.
- Using number line diagrams, clocks, or other models, add and subtract intervals of time in hours and minutes.
- Add subtract, and multiply whole numbers to solve metric measurement problems involving distances, liquid volumes, and masses of objects.

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 26 **Convert Customary Measurement Units**—pp. 234–241

Lesson 27 **Convert Metric Measurement Units**—pp. 242–249

Lesson 28 **Problem Solving: Measurement**—pp. 250–257

Measurement and Data

4.MD

STANDARDS

4.MD.3 Develop efficient strategies to determine the area and perimeter of rectangles in real-world situations and mathematical problems. *For example, given the total area and one side length of a rectangle, solve for the unknown factor, and given two adjacent side lengths of a rectangle, find the perimeter.*

Represent and interpret data.

4.MD.4 Display and interpret data in graphs (picture graphs, bar graphs, and line plots) to solve problems using numbers and operations for this grade.

Geometric measurement: understand concepts of angle and measure angles.

- 4.MD.5** Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement.
- a. Understand an angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through $\frac{1}{360}$ of a circle is called a "one-degree angle," and can be used to measure angles.
 - b. Understand an angle that turns through n one-degree angles is said to have an angle measure of n degrees.

4.MD.6 Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.

4.MD.7 Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real-world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure.

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 29 Problem Solving: Apply Area and Perimeter Formulas—pp. 258–265

Lesson 30 Problem Solving: Use Line Plots—pp. 266–273

Lesson 31 Understand Angle Measures—pp. 274–281

Lesson 31 Understand Angle Measures—pp. 274–281

Lesson 32 Use a Protractor to Measure Angles—pp. 282–289

Lesson 33 Problem Solving: Find Unknown Angle Measures—pp. 290–297

Geometry

4.G

STANDARDS

Draw and identify lines and angles, and classify shapes by properties of their lines and angles.

4.G.1 Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.

4.G.2 Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size.

SADLIER PROGRESS MATHEMATICS, GRADE 4

Lesson 34 **Draw and Identify Points, Lines, and Angles**—pp. 304–311

Lesson 35 **Classify Two-Dimensional Figures**—pp. 312–319
